# Discover KNX

## A leading home automation system

With more households prioritizing efficiency and ease, the control of lighting, blinds, heating, and cooling systems has gained significant attention. Automation, specifically through advanced home systems, is now fundamental in meeting these demands by enhancing comfort and optimizing energy consumption.

KNX plays a crucial role here as an open protocol that ensures all components can communicate through a common language, eliminating issues associated with proprietary systems. It allows for the control of various functions, including lighting, security systems, energy management, and HVAC, all through a unified system.

With over 30 years in the market, KNX enables efficient energy use and adapts to individual preferences, making it an ideal solution for those who prioritize comfort, sustainability, and security in their homes.

# Reliability with KNX

# Design the connected home of your dreams with SpaceLogic™ KNX

Creating the connected home of your dreams has never been easier. Discover Schneider Electric's KNX control system, a unique solution for truly smart homes.

Easy to use and with powerful features, it is the perfect solution for your home

- Comfort and convenience
- Security and protection
- Energy management
- Flexibility and scalability
- Design

Through remote and local control:

Laptop

Smartphone

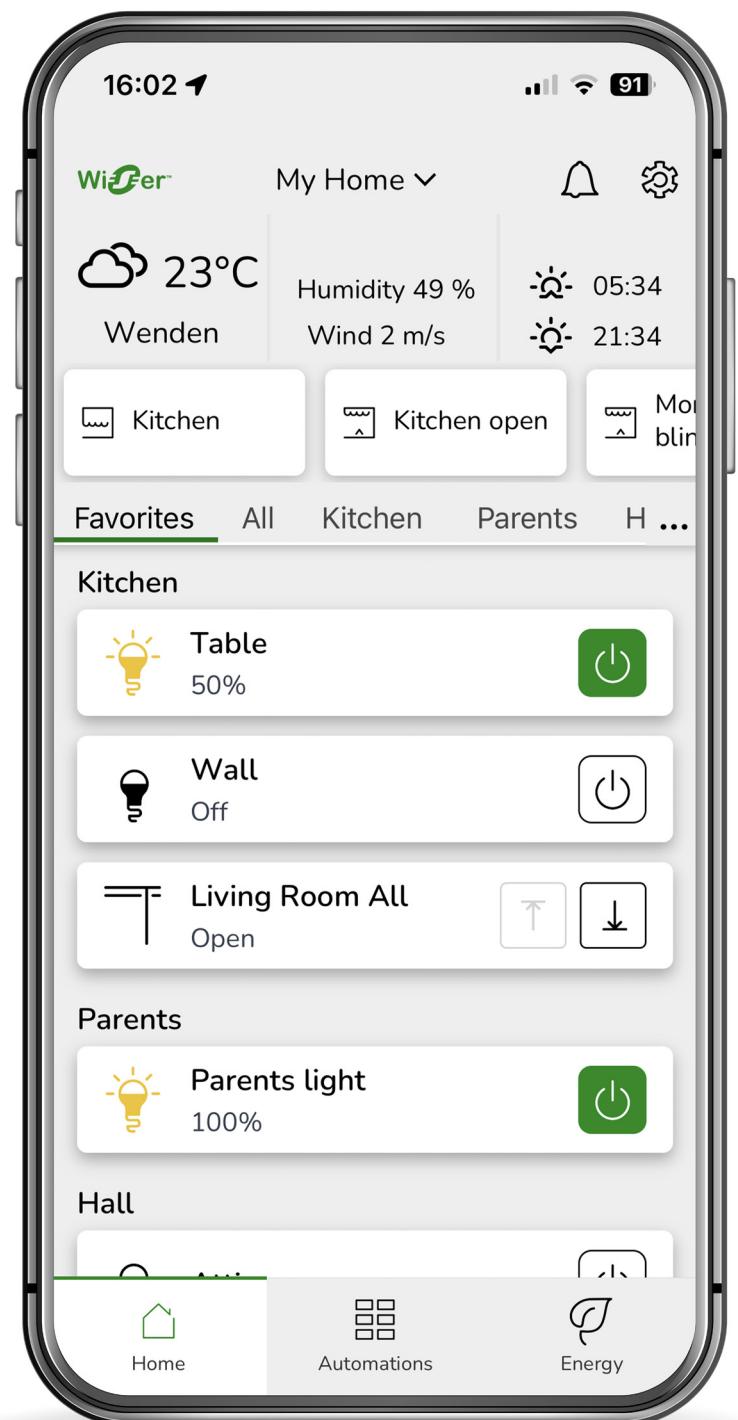

Tablet

# One solution for your home...

...offering tailored features, trusted reliability, and exceptional energy-conscious performance.

# Hybrid wireless solutions with SpaceLogic™

The hybrid solution opens up a world of endless possibilities for the living or working space. With this innovative solution, you can enjoy unparalleled comfort, remarkable energy efficiency and a truly smart environment.

Whether they prefer the reliability and flexibility of KNX or the wireless convenience of Zigbee sensorics, our hybrid solution offers the perfect synergy, bringing together the strengths of both technologies.

Say goodbye to limitations and embrace a new era of smart buildings!

# Cybersecurity at home

That's why we prioritize a technology that meets all required safety standards and regulations:

- Standardized according to EN 50090-3-4 – which means, that KNX successfully blocks hacker attacks on the digital infrastructure of networked buildings.
- ISO 18033-3, utilizing AES 128 CCM encryption - the highest encryption standards to effectively prevent attacks on the digital infrastructure of buildings and to achieve the highest level of data protection.

# Rely on a certified Schneider Electric EcoXpert partner

Your time is valuable, let our specialists, the EcoXperts, guide you in creating the connected home you've always envisioned.

Through our unique partnership program, we combine unmatched expertise with cutting-edge innovation to deliver high quality, customized solutions designed to meet your specific needs.

**EcoXpert™**

Our partners are trained and certified to deliver best-in-class solutions with the highest level of expertise.

# Personalization

# What can you personalize?

Transform homes with customized KNX solution to fit unique lifestyles. Experience the convenience and comfort of a system tailored to your routine and preferences.

-  [Light](#)
-  [Shutters](#)
-  [Heating and cooling](#)
-  [Automate your routine](#)
-  [Schedules](#)

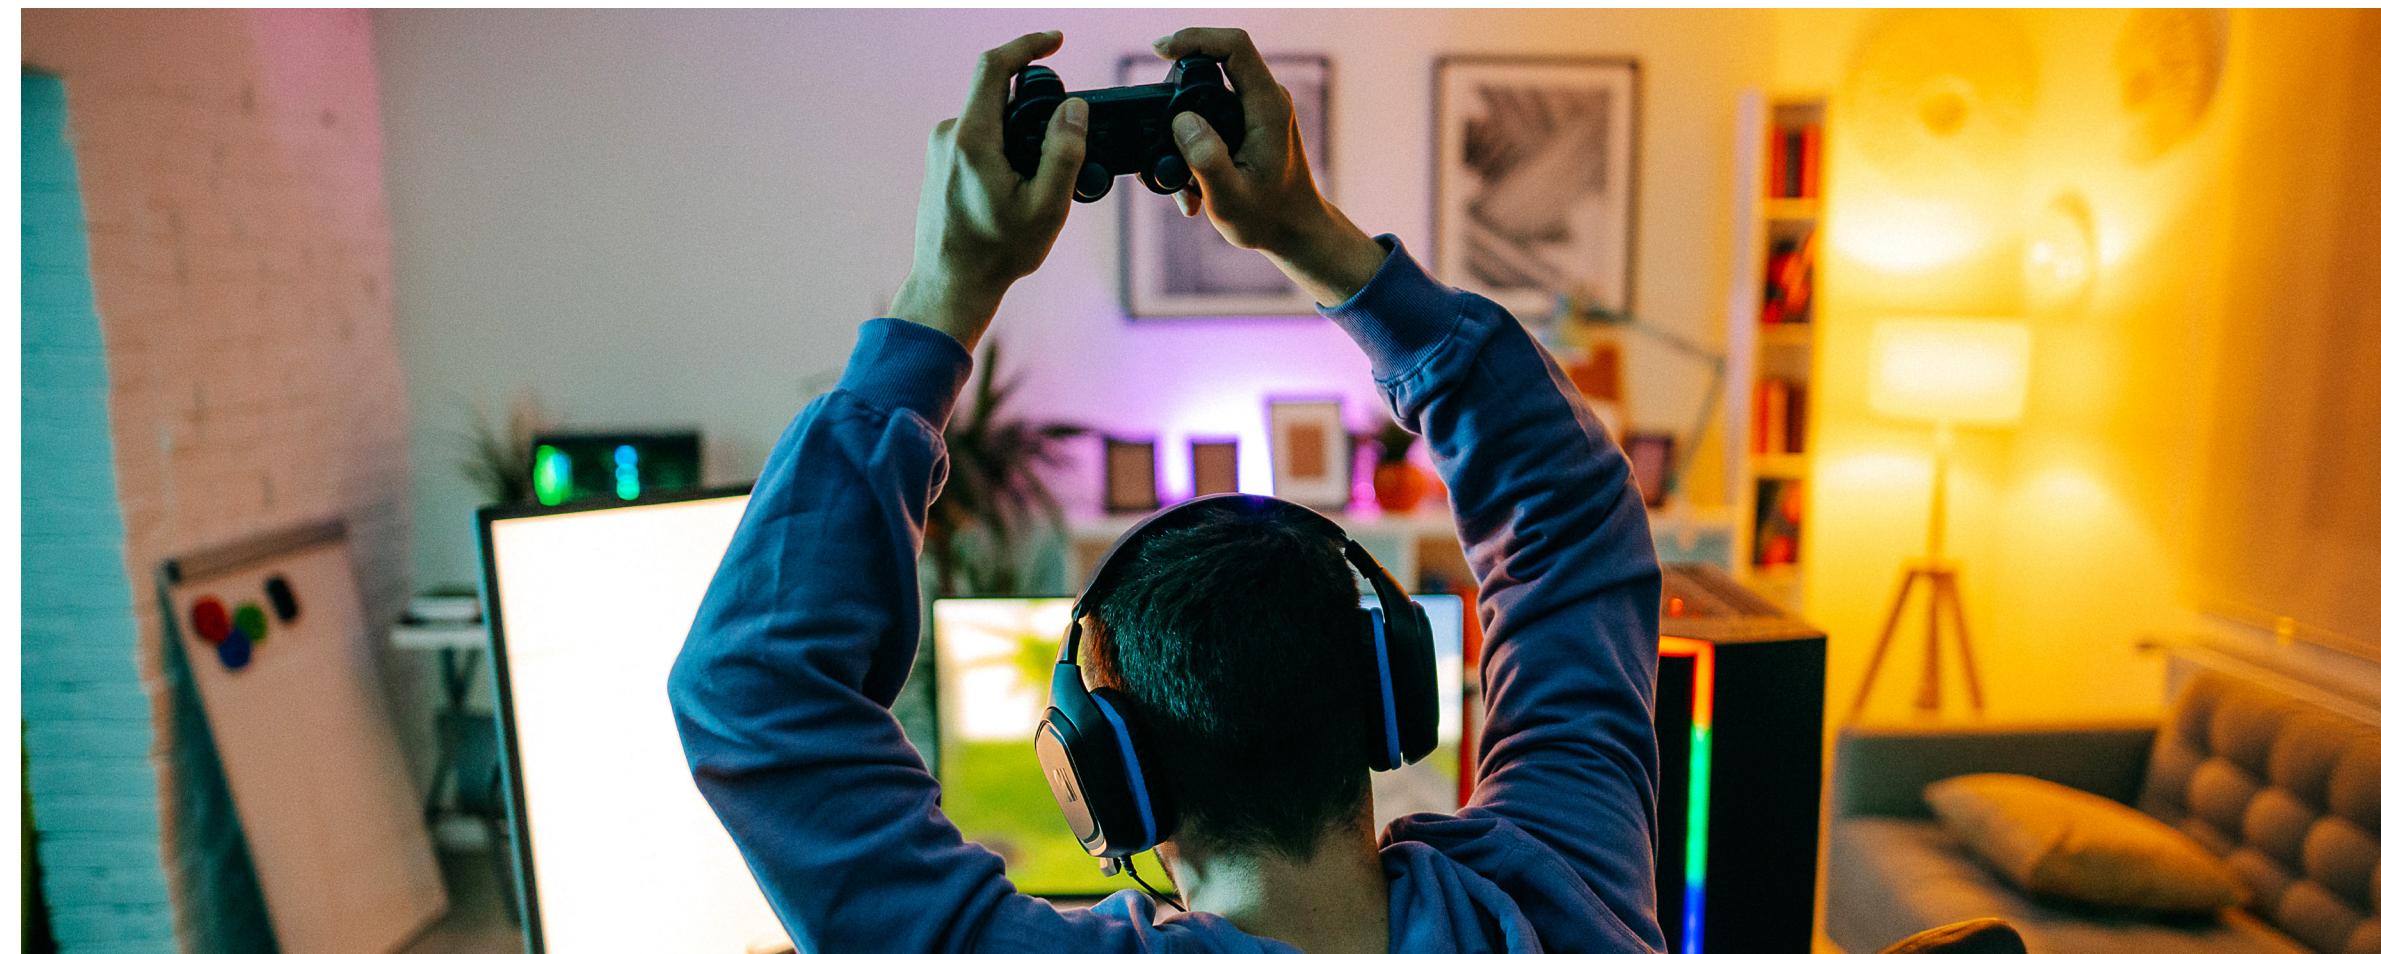

-  [Create moments](#)
-  [Weather](#)
-  [Special needs](#)
-  [Security](#)

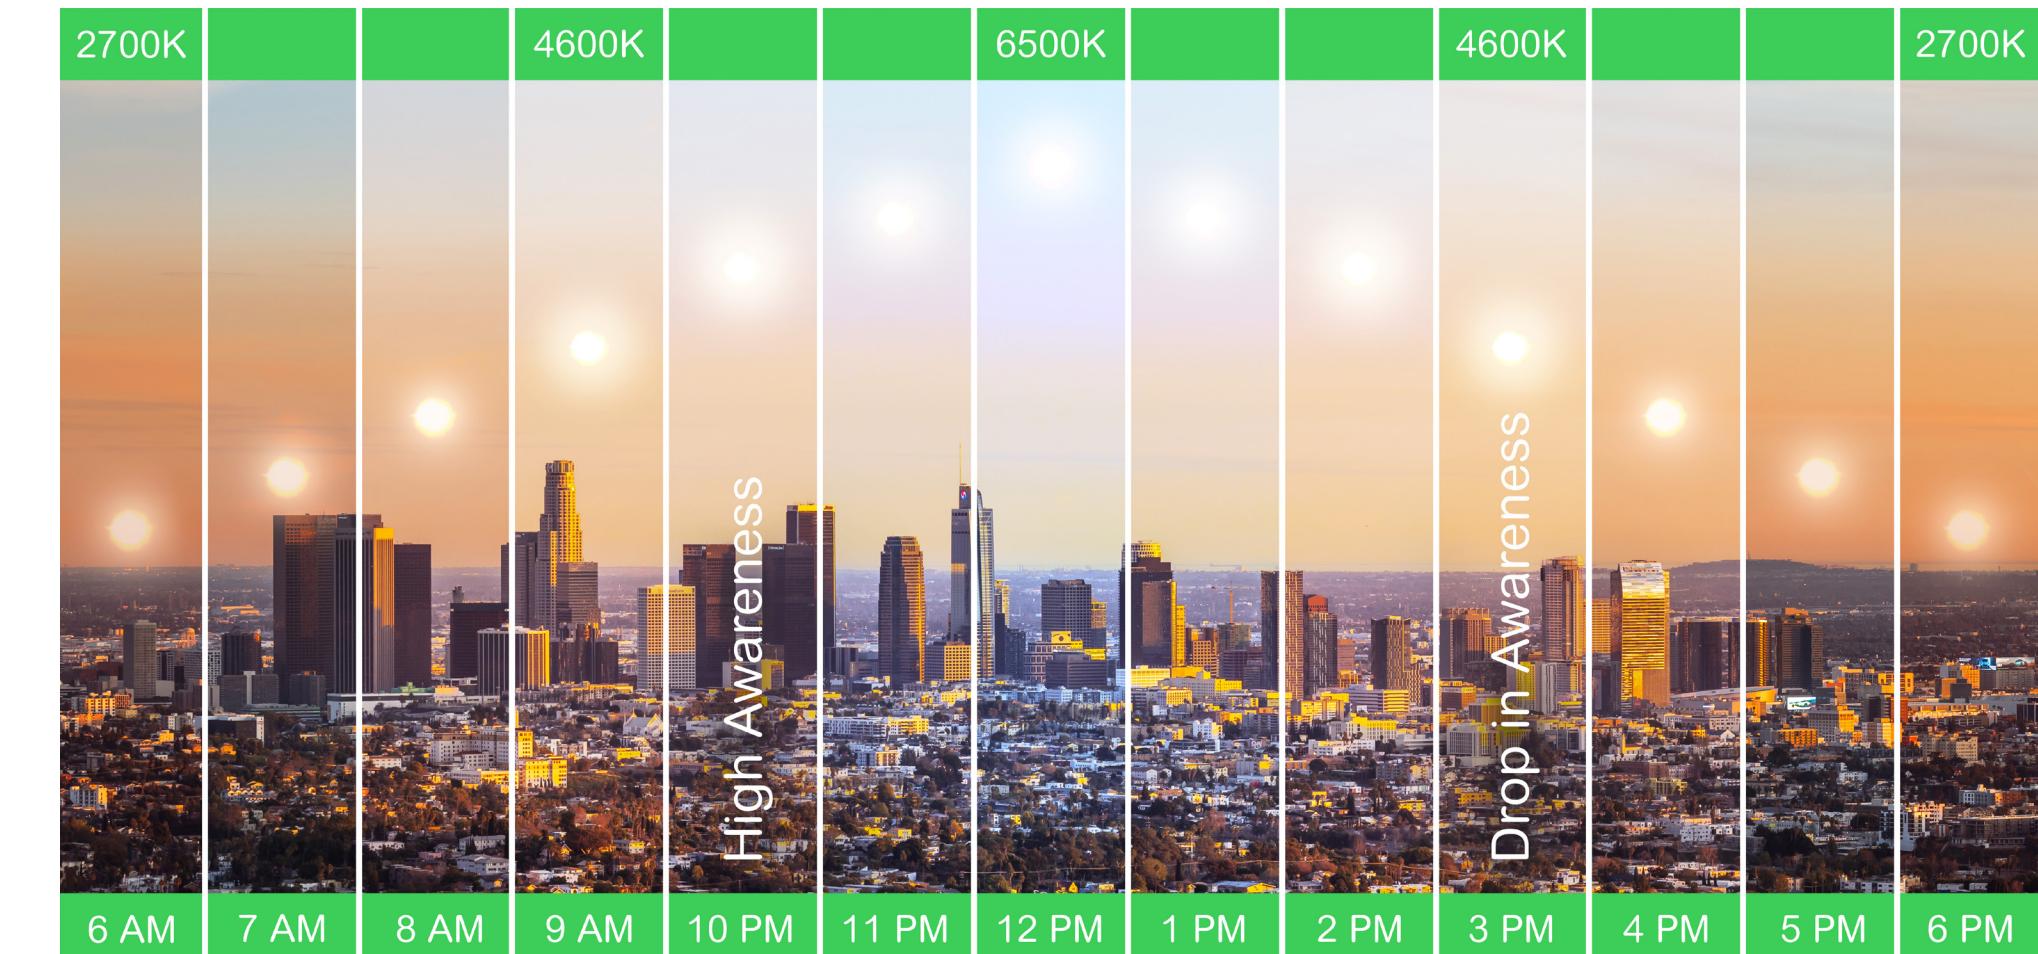

# Advanced lighting control (DALI/RGB/TW)

By tailoring lighting to our daily routines, we can enhance our waking, working, and relaxing experiences. Using DALI, the color temperature and brightness of LED lamps can be independently adjusted, allowing for a customizable ambiance that mimics the behavior of incandescent lamps.

# Circadian lighting control

The system also modifies the color temperature of the lights to reflect natural light throughout the day. With circadian control, occupants get a more natural environment within the home that is attuned to external conditions.

[Back to Menu](#)

# Shutter control

Between switching your electrical shutter on and off, there lies a world where we harness the sun or play with shadows.

Control light and darkness with the press of a button, or let your blinds adjust automatically based on the time of day. Not only does this help you save energy, but it also creates comfortable shade. You can even roll your blinds to welcome the sun's warmth when desired.

For managing your roller shutters, awnings, or curtains, we provide solutions that can be operated manually or automatically, wirelessly, and integrated into a smart home system. This setup offers convenience, prevents your rooms from getting too hot, and maintains your privacy.

Set automated actions to simulate presence or program your awnings to automatically close when rain is expected. Keep your shades tailored to your specific needs.

[Back to Menu](#)

## Keep the right temperature

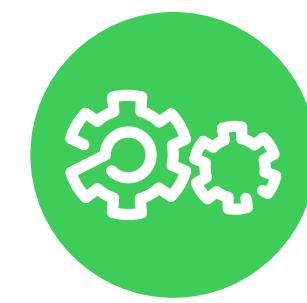

Enjoy a comfortable home with personalized temperature and a pleasant climate by easily regulating heating and air conditioning. You can set the right temperature manually or automatically via the Wiser KNX app or the voice control assistant.

## Air quality monitoring

The air quality indoors may be worse than outdoors. Thanks to our CO<sub>2</sub>, humidity and temperature multi-sensor, the air quality in your home is at the perfect level and you will be notified if something is wrong.

[Back to Menu](#)

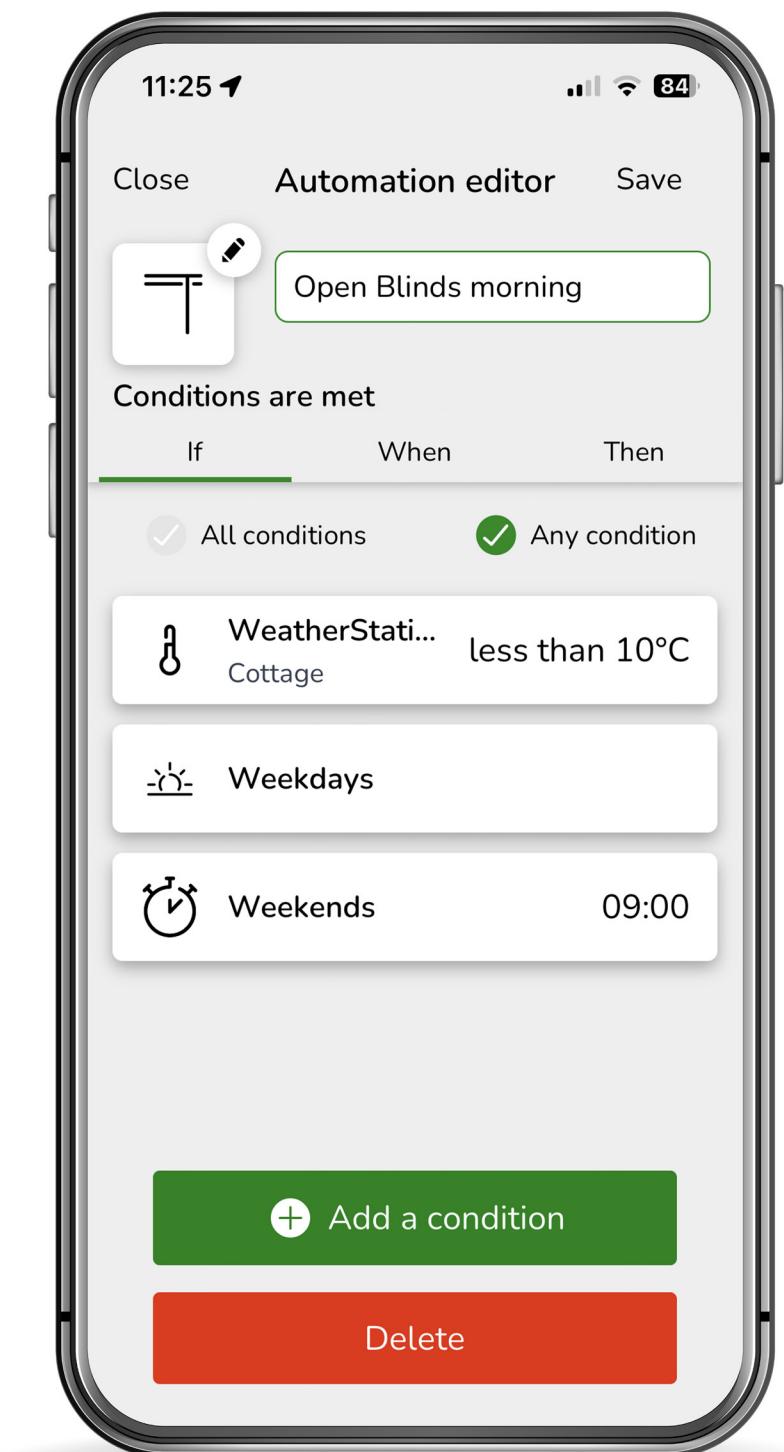

# Automate your routine

Enhance your home's comfort with seamless automation. Using the Wiser KNX App, you can create personalized settings that fit your daily routines.

Set up an automation to open your blinds at 09:00 AM on cold mornings, ensuring everything runs on time and with precise accuracy. Say goodbye to alarms — automate your needs effortlessly with the KNX SpaceLogic™ system.

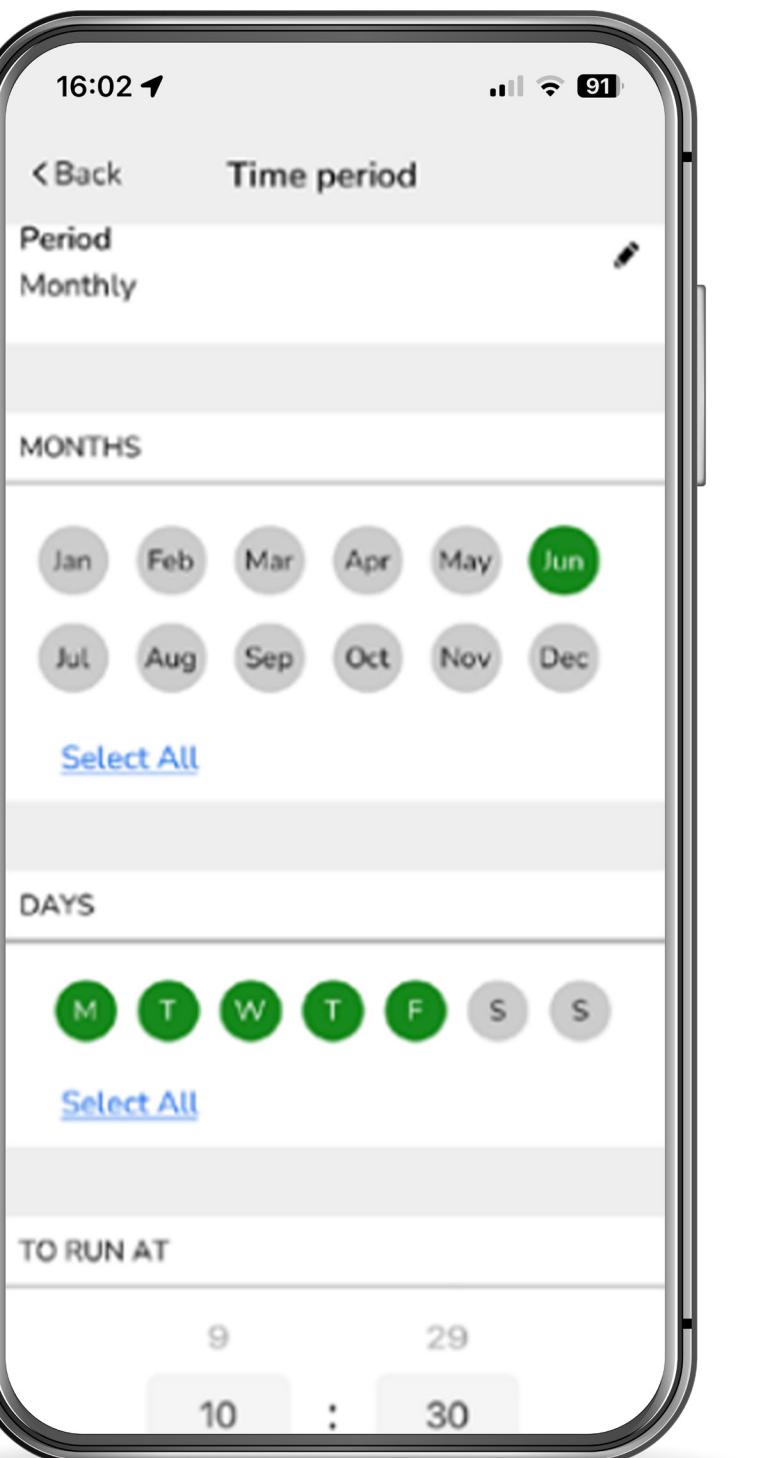

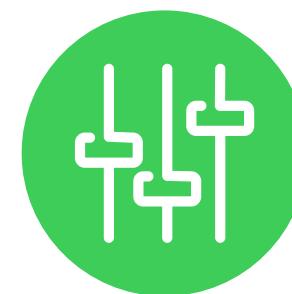

[Back to Menu](#)

# Schedules

With a KNX solution, you can seamlessly integrate home automation to manage recurring tasks and events. Imagine automating your daily routine with ease. For instance, you could program your air conditioning to turn on every weekday morning at 7:00 AM, ensuring your home is cool and comfortable by the time you wake up. Then, set it to adjust to a more energy-efficient temperature while you're away at work. This setup not only optimizes your comfort but also adds a layer of convenience by eliminating the need for manual operation.

[Back to Menu](#)

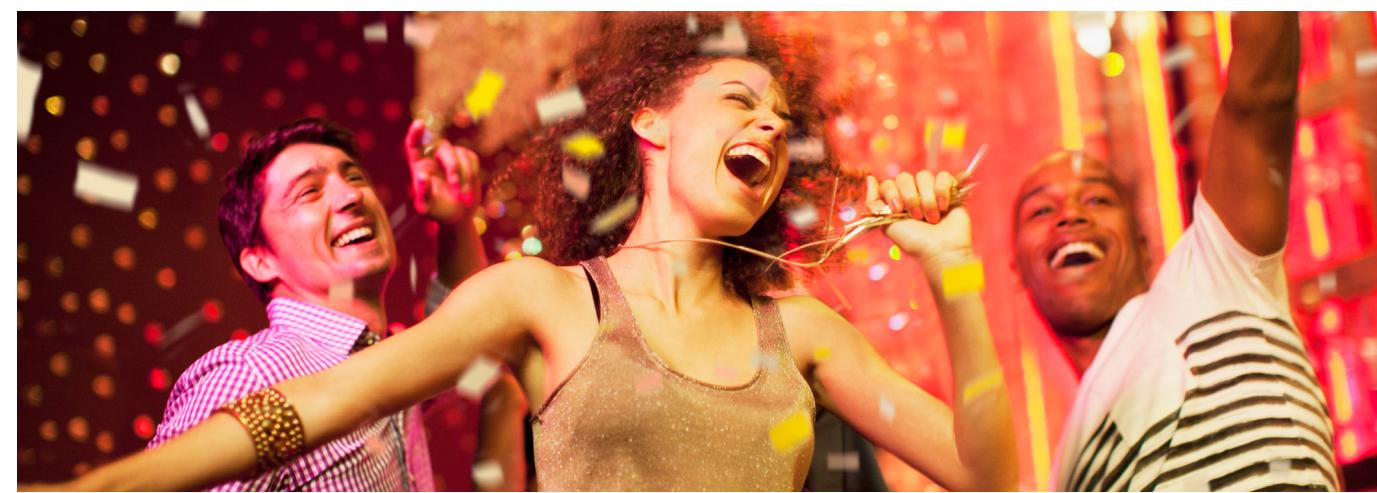

# Moments tailored to your home

Moments is an incredibly useful feature that you'll wonder how you ever lived without. With just one click, you can create moments that dim the lights, close the blinds, play music, and adjust the heating — all with ease. Now, just enjoy and relax after work. No more doing every task yourself — comfort is just one click away.

## Reading moment

Set up your ideal reading book and create a moment for the perfect atmosphere. Set up the brightness of the lights in your reading area and position the shutters just the way you like them for your reading time. With this feature you will be just a click away your relaxing reading session.

## Party moment

Create a party moment atmosphere by automatically playing music throughout the house and changing the lighting with a single touch.

## Cinema moment

If you love movie nights, set up a moment to initiate the home cinema scenario. This will automatically turn on your home theater system, adjust the ambient lighting, bring down the blinds, and activate immersive sound, creating a luxurious cinematic experience.

Compatible with

**SONOS** **PHILIPS**  
THE WIRELESS HiFi SYSTEM **hue** personal wireless lighting

and many more.

[Back to Menu](#)

# Outdoor weather status

Dedicate yourself to your tasks without worries, knowing that your home is prepared for any weather!

Our advanced weather station keeps you informed of weather parameters, automatically adjusting blinds for sun protection, securing them during storms, and controlling outdoor lighting at night.

With sensors for wind, rain, temperature, and light, you can effortlessly manage light and darkness in your home. Enjoy a comfortable shade, save energy in watering, and enhance privacy with our manual or automatic solutions for roller shutters, awnings, or curtains. Experience the convenience of a smart home that adapts to your needs while providing security and comfort

[Back to Menu](#)

## Presence simulation

Set up an "away" mode to simulate your presence when no one is home to deter unpleasant guests.

Presence simulation is a function in home automation systems that mimics human activity in an empty house or building. This is achieved through several techniques, such as; Turn lights on and off or Open and close curtains, awnings and blinds.

The purpose of these actions is to create the impression that someone is home, which acts as a powerful deterrent against burglary. This feature is especially useful for those who travel frequently or spend a lot of time away from their smart home, ensuring that the home always looks inhabited.

[Back to Menu](#)

# Special needs

Schneider Electric's KNX home automation system is designed to improve the quality of life for everyone. By offering easy control and automation of various home functions which empowers users to live more independently and comfortably.

## Main Features

**Simplified control:** Easily manage blinds, lighting, heating, and air conditioning.

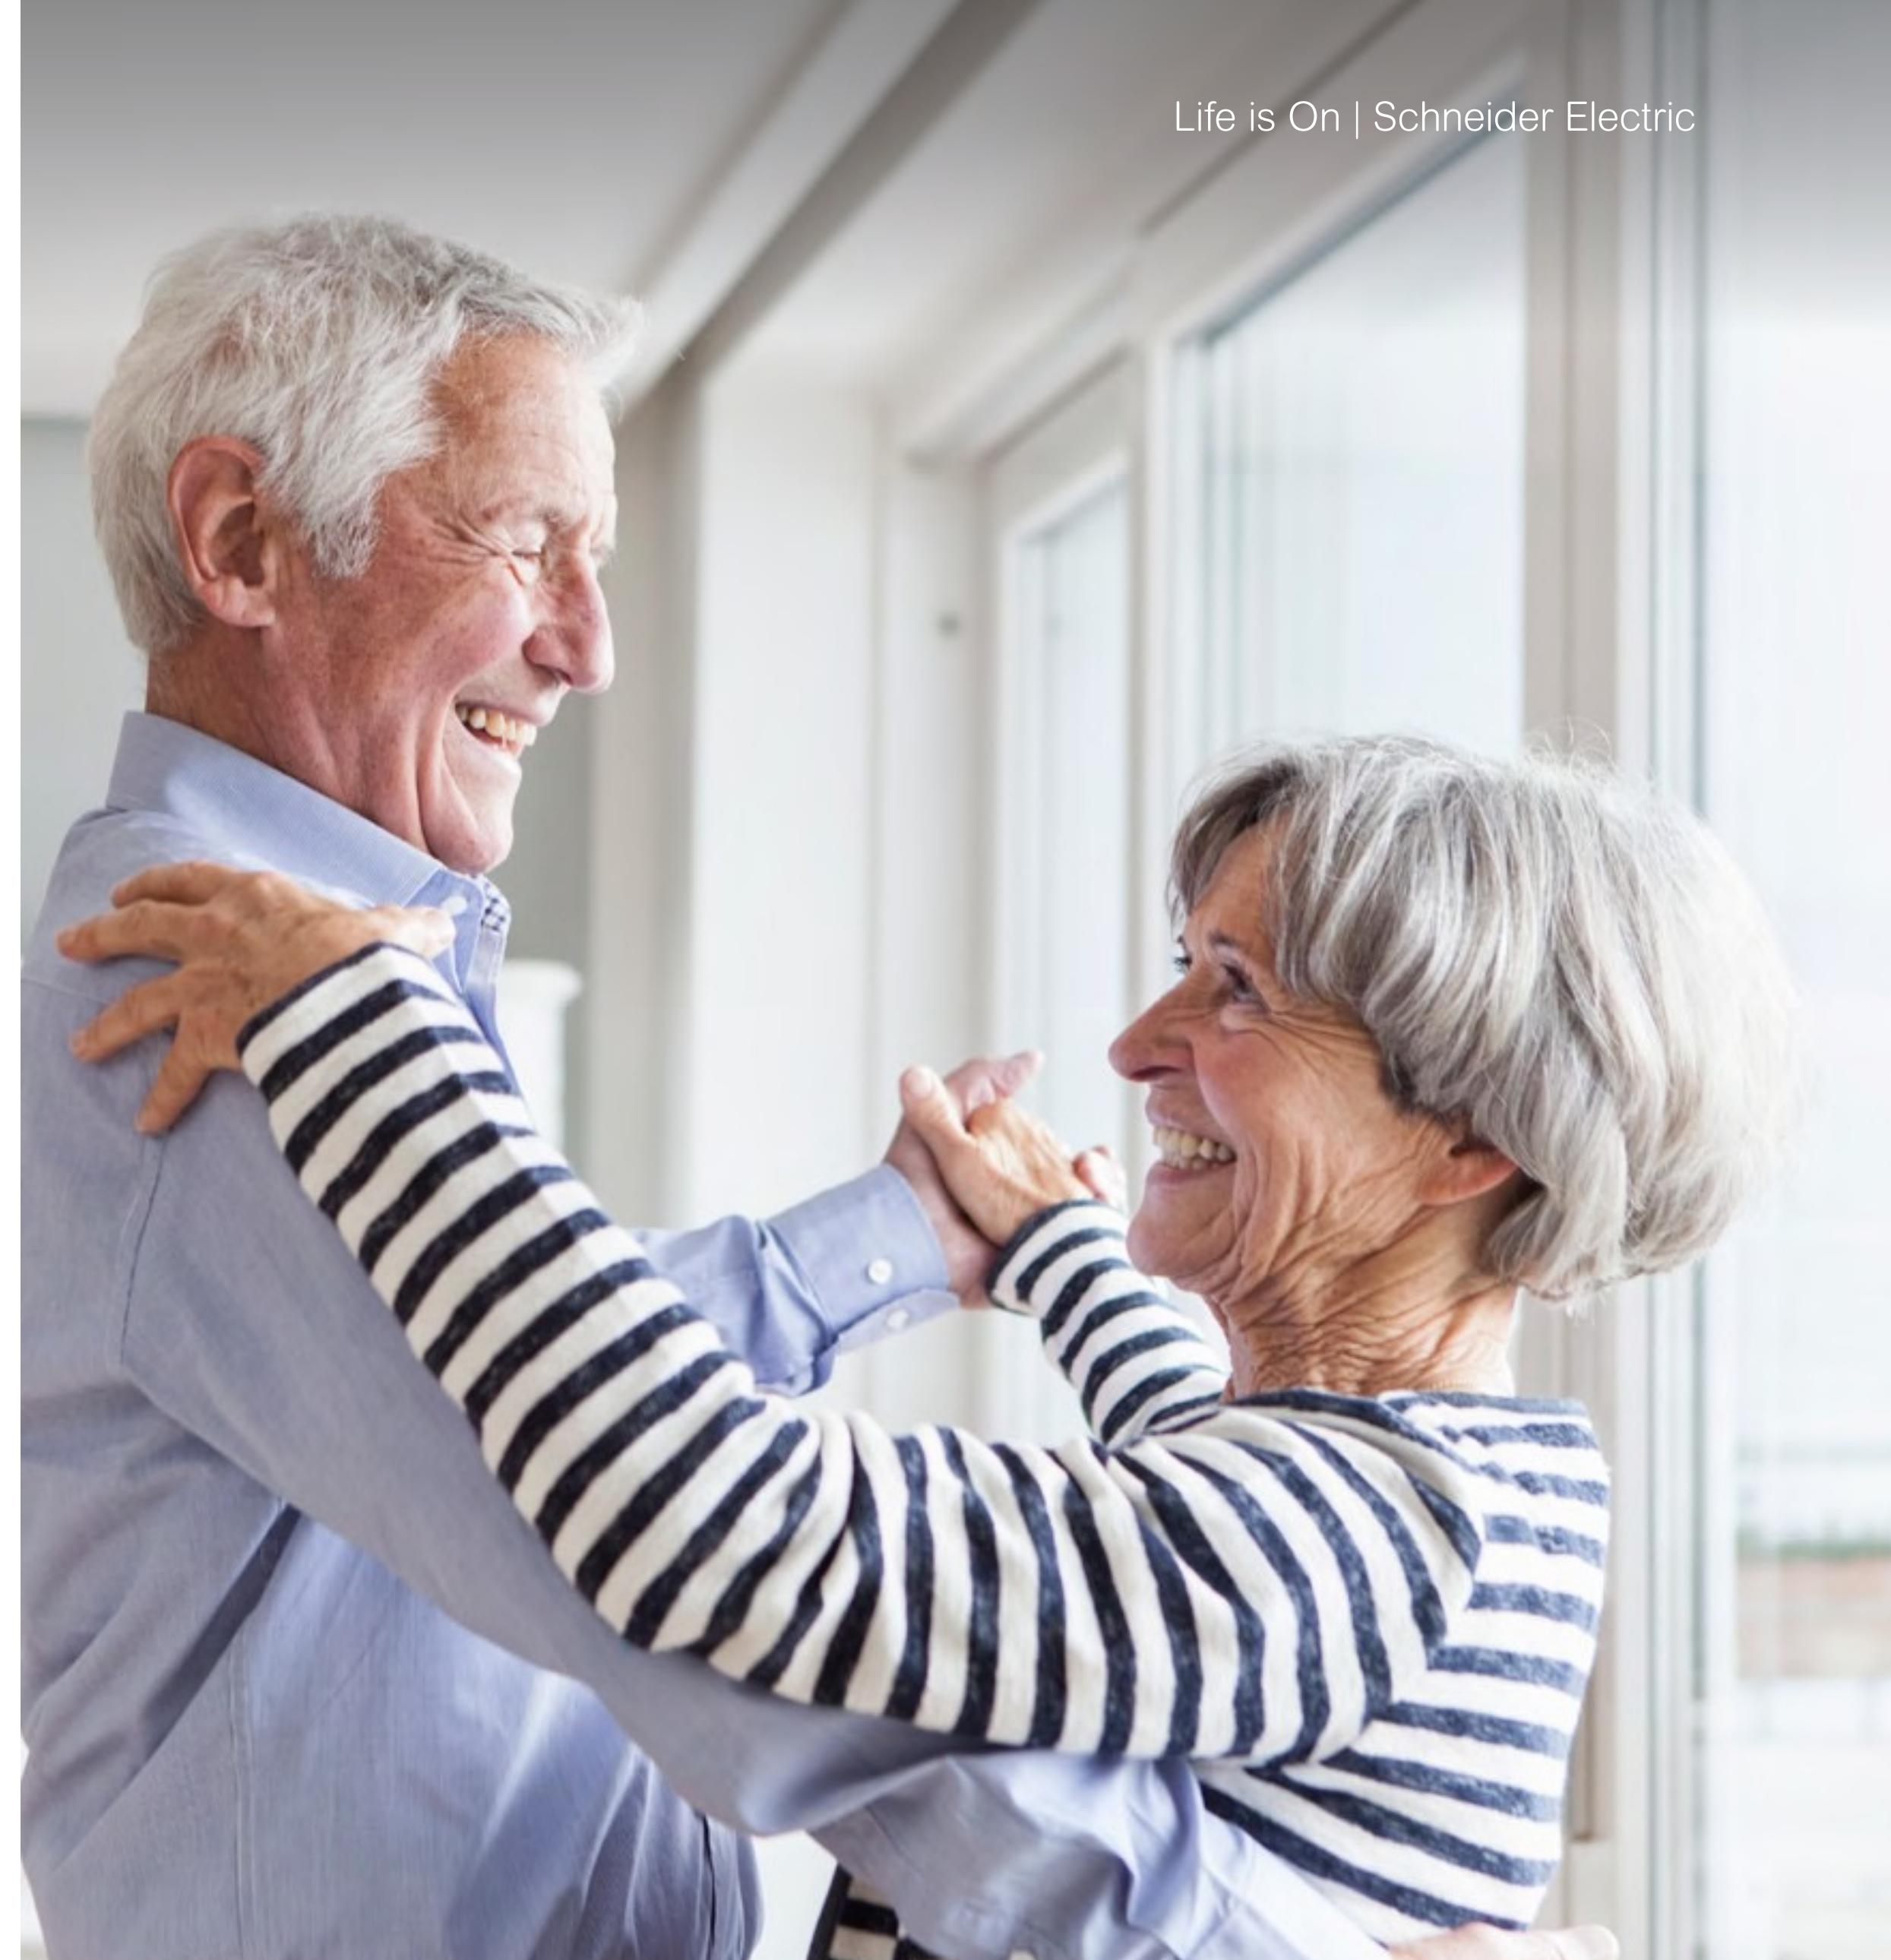

**Voice control solutions:** Includes voice control for managing electrically operated slide doors, lights, blinds, air conditioning, and motorized beds via a KNX interface.

**Automated tasks:** Routine tasks can be automated for added convenience.

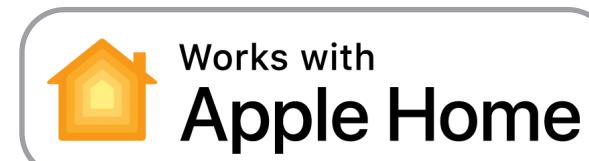

[Back to Menu](#)

# Control your home from the palm of your hand

The Wiser KNX app enhances the smart home experience with its user-friendly and intuitive design. It gives a clear overview of rooms, devices, and settings. It can easily control KNX devices, set schedules, create moments, and automate tasks, as well as detect presence. Manage everything effortlessly:

- Lights, blinds, heating, cooling, etc.
- Advanced Programming
- Moments (scenes) and automations
- Energy awareness
- Electric Vehicle
- Support Device notifications
- Home Management (Multisite)

# Central control

## Touch Unit

Looking for a single device to control your KNX smart home? The 4" SpaceLogic™ KNX Touch Unit is the ideal choice. The touch unit combines the functionality of a thermostat and a multifunctional pushbutton with the intuitive operation of a smartphone or tablet. Also customize the device's screen saver and background image.

## Tablet

With an iPad or tablet connected to Wiser for KNX, clients can control all functions simply and intuitively from home. A touch panel in the entrance hall provides an overview of the building's status and enables central functions like "presence simulation" or "central shutdown."

# Future-proof your home with advanced energy efficiency features

# Meeting the rising energy needs of modern homes

## Increasing electricity consumption in the home

Demand for electricity in the home is growing at an unprecedented rate, driven largely by the rise of electric vehicles, home charging in more than 80% of cases, and the increased use of heat pumps. This means that your customers' homes need, or will sooner or later need, more energy than ever before.

## Electricity needs to be greener and more affordable

Domestic electricity accounts for 20% of CO2 emissions. Homeowners are looking for ways to reduce their carbon footprint without compromising their comfort, especially at home.

## Spiraling energy costs

Prices fluctuate more than ever, and homeowners are looking for solutions to control and reduce their expenses.

## Energy Savings with KNX

- up to 40 % with KNX shading control
- up to 50 % with KNX individual room control
- up to 60 % with KNX lighting control
- up to 60 % with KNX ventilation control

Source: KNX Association. "Energy Efficiency With KNX." KNX, Accessed 28 Apr. 2025, [https://www.knx.fi/doc/esitteet/Energy-Efficiency-With-KNX\\_en.pdf](https://www.knx.fi/doc/esitteet/Energy-Efficiency-With-KNX_en.pdf).

# Smart metering

With energy source monitoring, you get insights into your electricity consumption. You can review the data daily, monthly, or annually and also take immediate action if necessary.

Understand where your energy is being used. What gets measured, gets managed. Be aware on how much your home consumes electricity. Understand what appliances are consuming the most energy in your home in order to be able to take well-informed decisions.

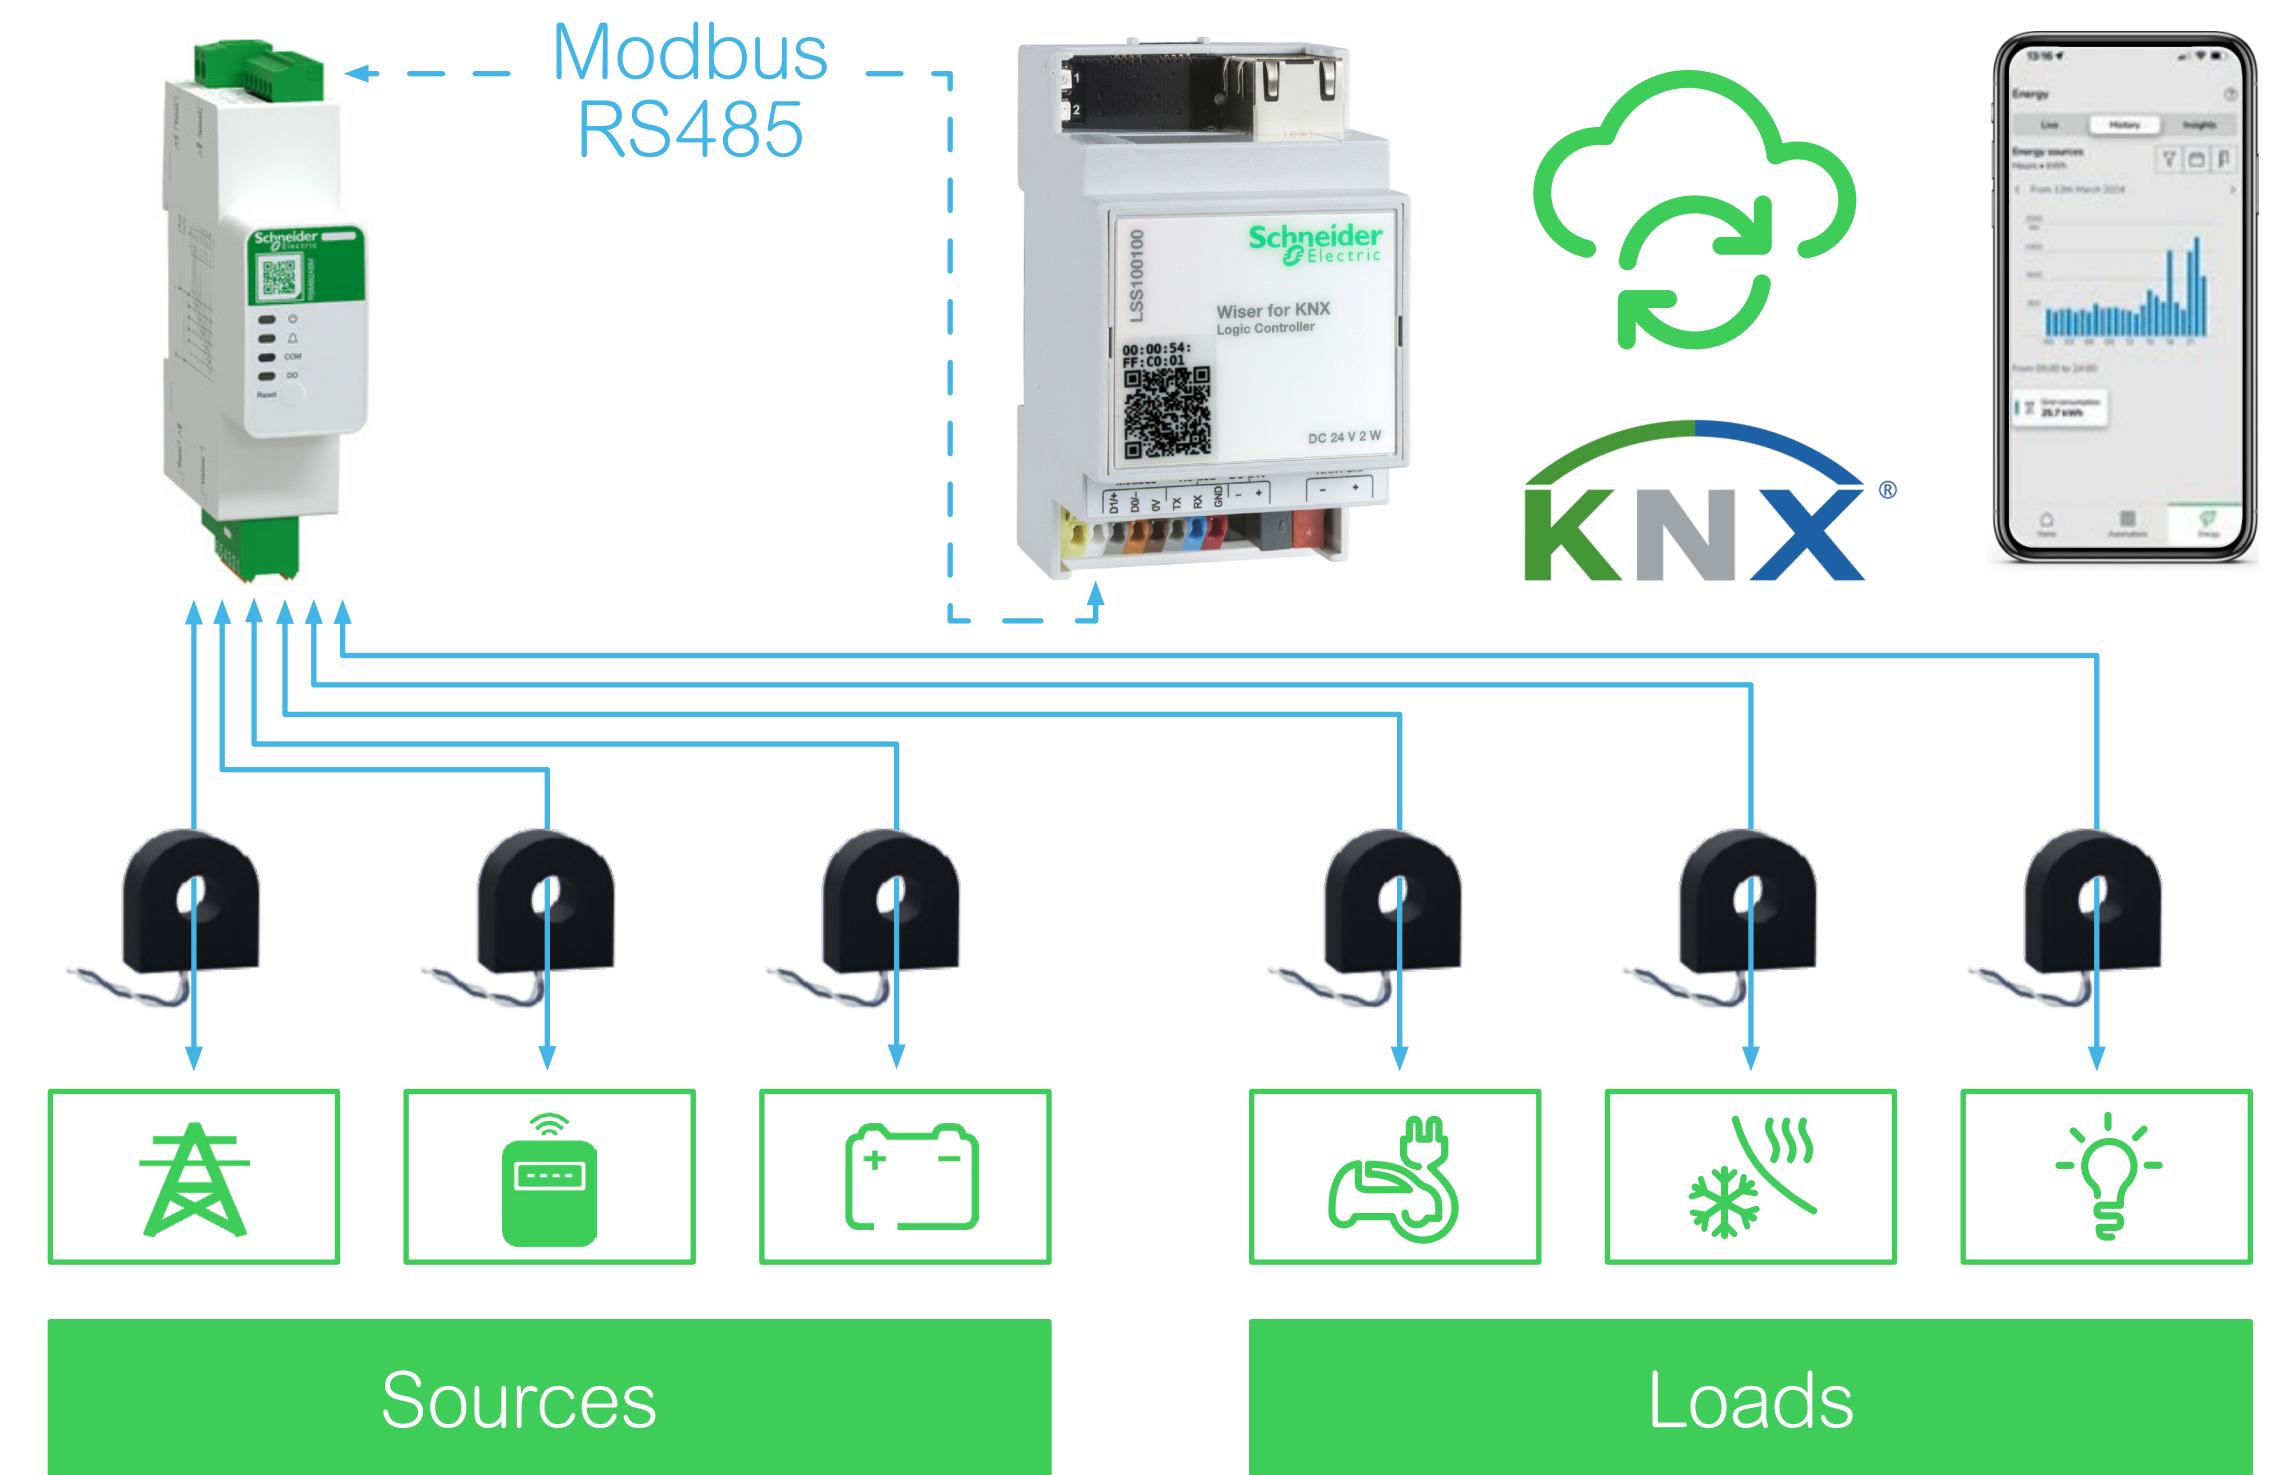

# Efficient energy monitoring

Measure the current, voltage, active power, power factor, and active energy received and delivered by a photovoltaic system. Communicating this data via RS485 serial Modbus communication to the Wiser for KNX server.

All measurements are conducted in accordance with IEC 61557-12 standards. And the data can be viewed on your desktop, tablet or through the Wiser KNX app.

## Resi9 Energy Meter Wired

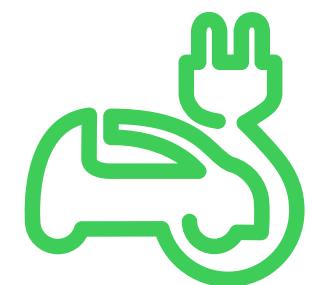

# Energy management

The SpaceLogic™ KNX system will help to optimize your electricity consumption.

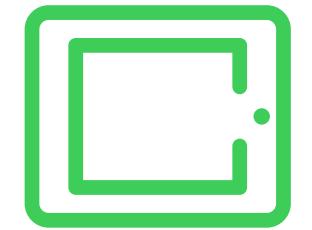

## Energy balancing

Prioritize energy usage to prevent power trips. For example, reduce or stop the electrical vehicle charging when there is a high electricity demand from other electrical loads (oven, stoves, extractor hood, aerothermia, etc).

## Energy management

Create automations to maximize the energy consumption during off-peak hours. For example, automatically start charging your car during the most economical hours.

## Supervision and control

Advance energy monitoring and easy control to adjust the energy management strategy by using the Visualization graphics for smartphone, PC and tablet.

# Who is a prosumer?

"Prosumer" is a term composed of the words PROducer and conSUMER of electricity.

A prosumer is a homeowner who has a domestic means of producing electricity, usually from a solar installation, and who consumes the electricity he produces. They can access the electricity supply from the grid to supplement their domestic production levels and meet their needs or they can export back to the grid any solar energy they have produced that is in excess of the needs.

The solution helps owners:

Moderate exposure to price hikes

by producing their own electricity.

Reduce bills, optimize consumption

by responding to increased power needs with less electricity coming from energy retailers.

Improve carbon footprint

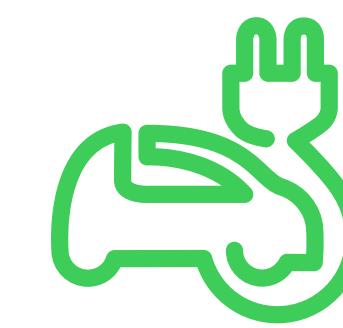

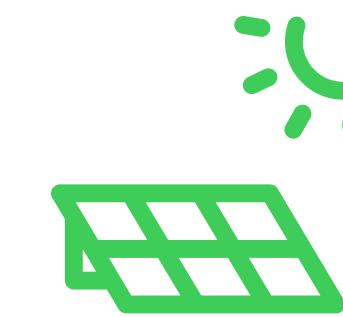

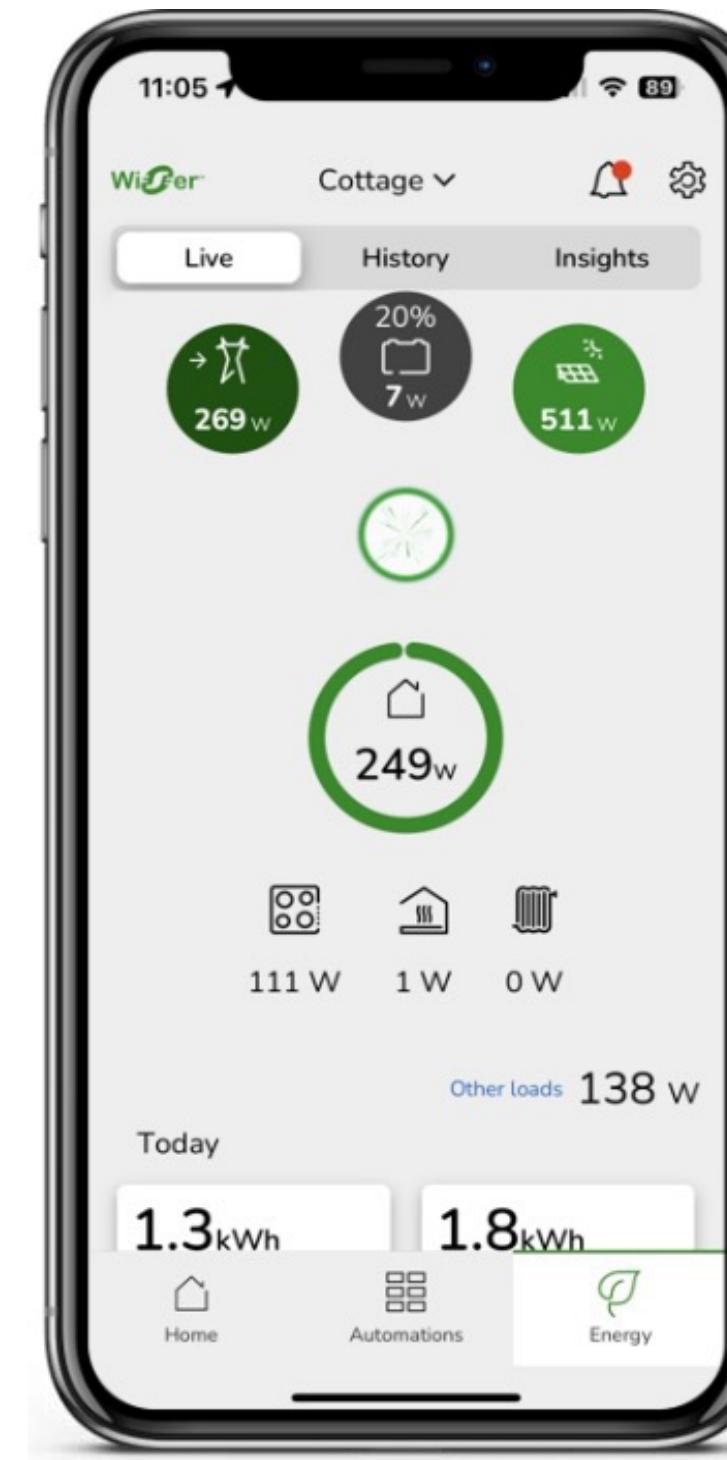

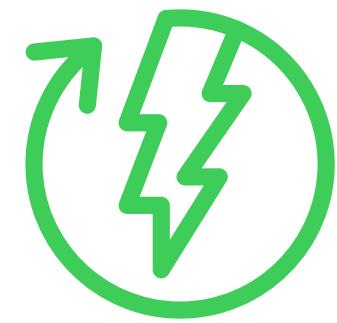

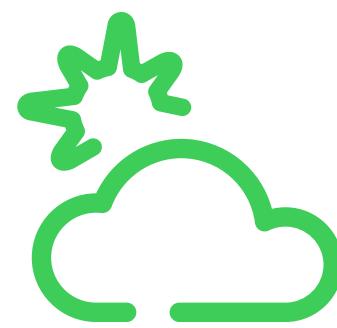

by driving EV powered with green and self-generated electricity.

# Prosumer Solution

With our solution you can easily monitor and control your energy use

**Climate Control**  
Manage aerothal or heat pump systems based on solar production, battery status, or the most economical tariff period. Maximize the use of geothermal energy to maintain the desired temperature at the lowest cost.

**Energy Management**  
Monitor consumption, compare billing periods, receive alerts for consumption limits, prioritize circuits, and get push notifications for incidents.

## Photovoltaic Management

Optimize and manage consumption based on needs. Supervise and analyze production/consumption flow.

## Storage Management

Manage battery charging at optimal times with consumption prediction. Charge batteries with photovoltaic production or at the best price for consumption when the tariff is higher.

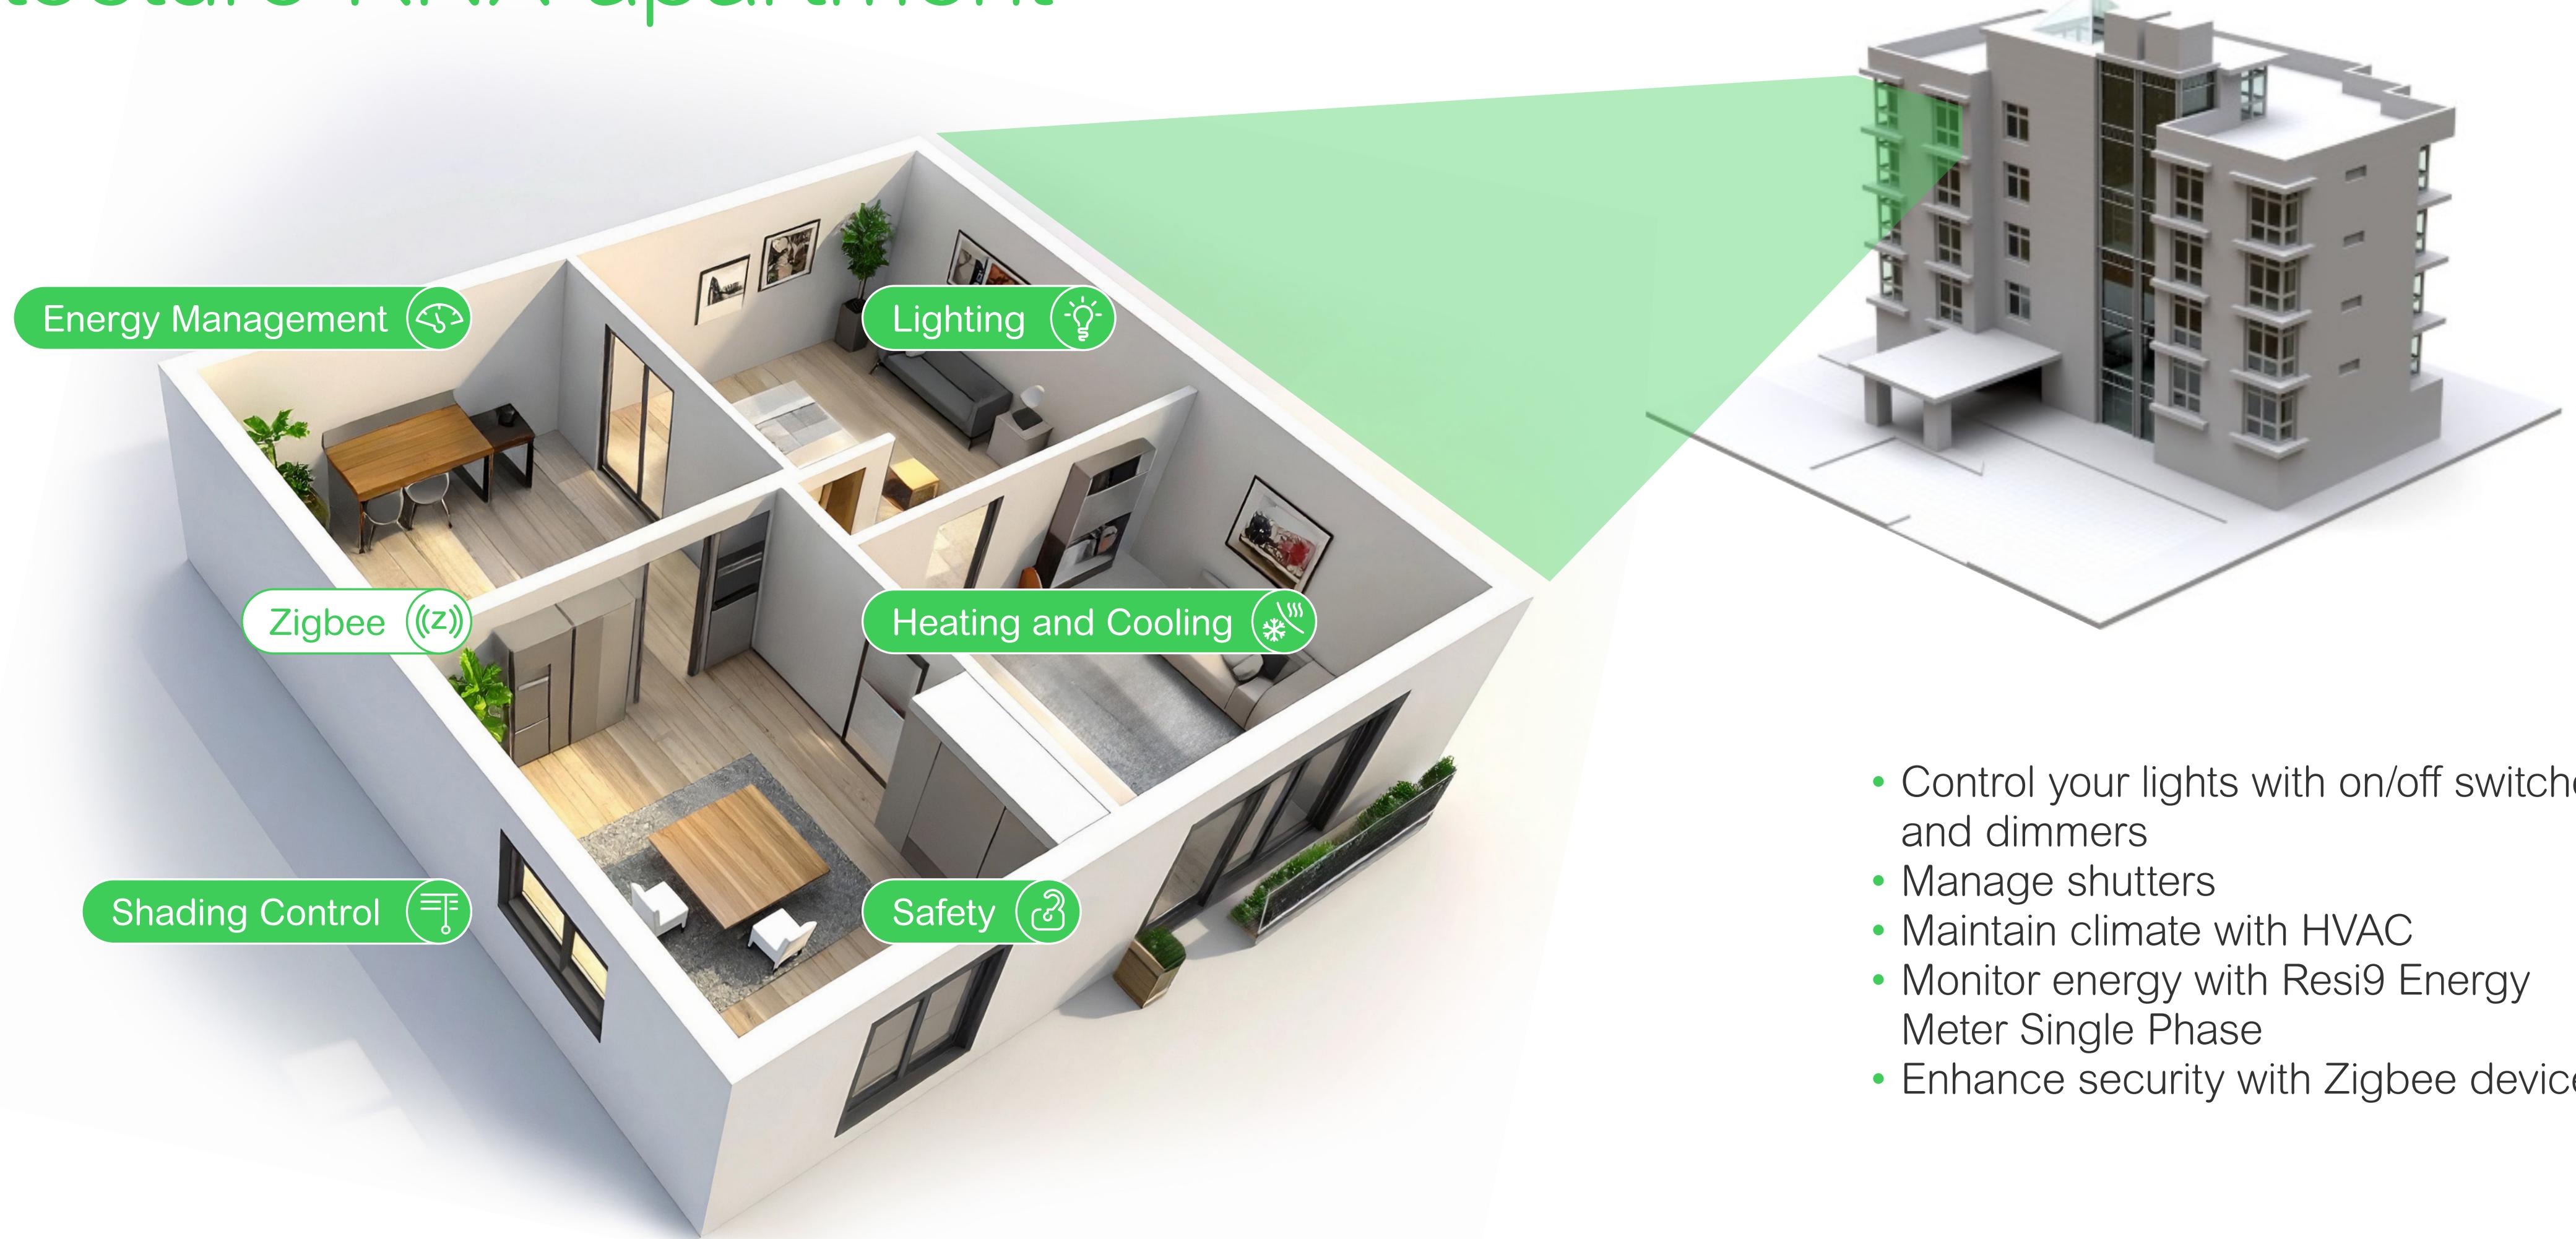

## Electric Vehicle

Balance loads based on consumption. Set charging limits according to the tariff. Schedule charging times.

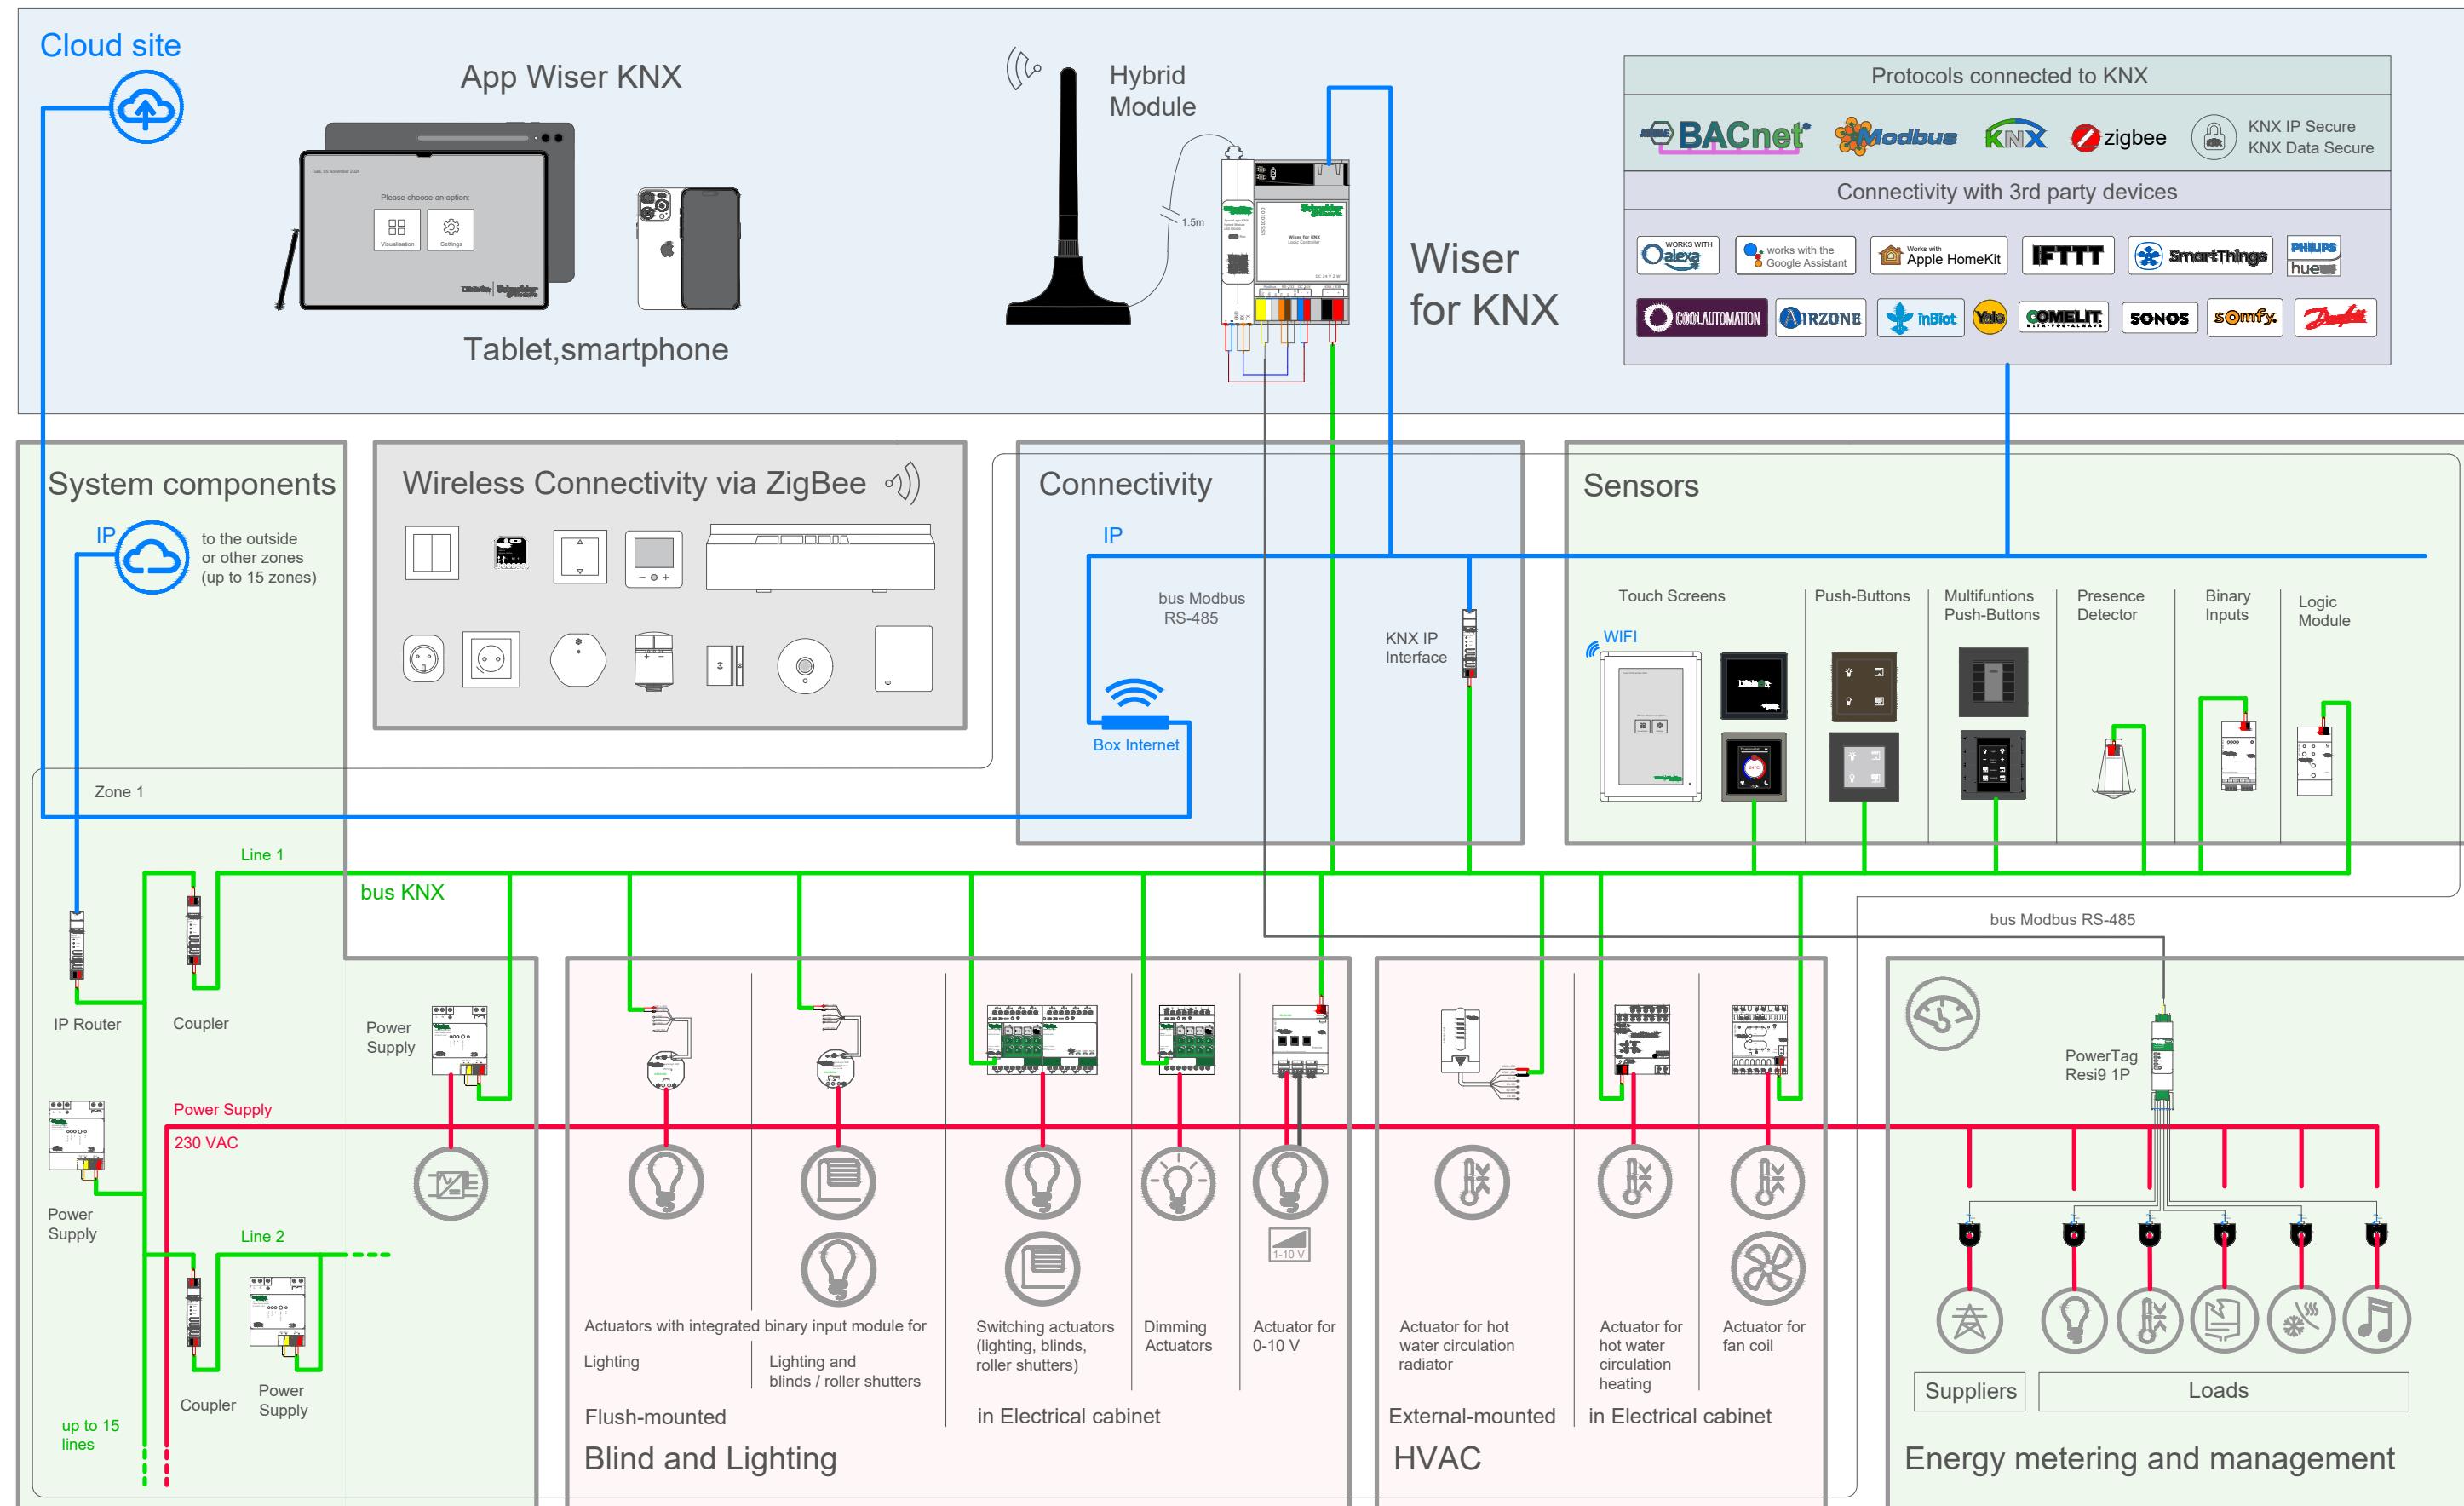

# KNX architectures for all types of homes

We cover all needs for all types of homes with KNX SpaceLogic™

# Architecture KNX apartment

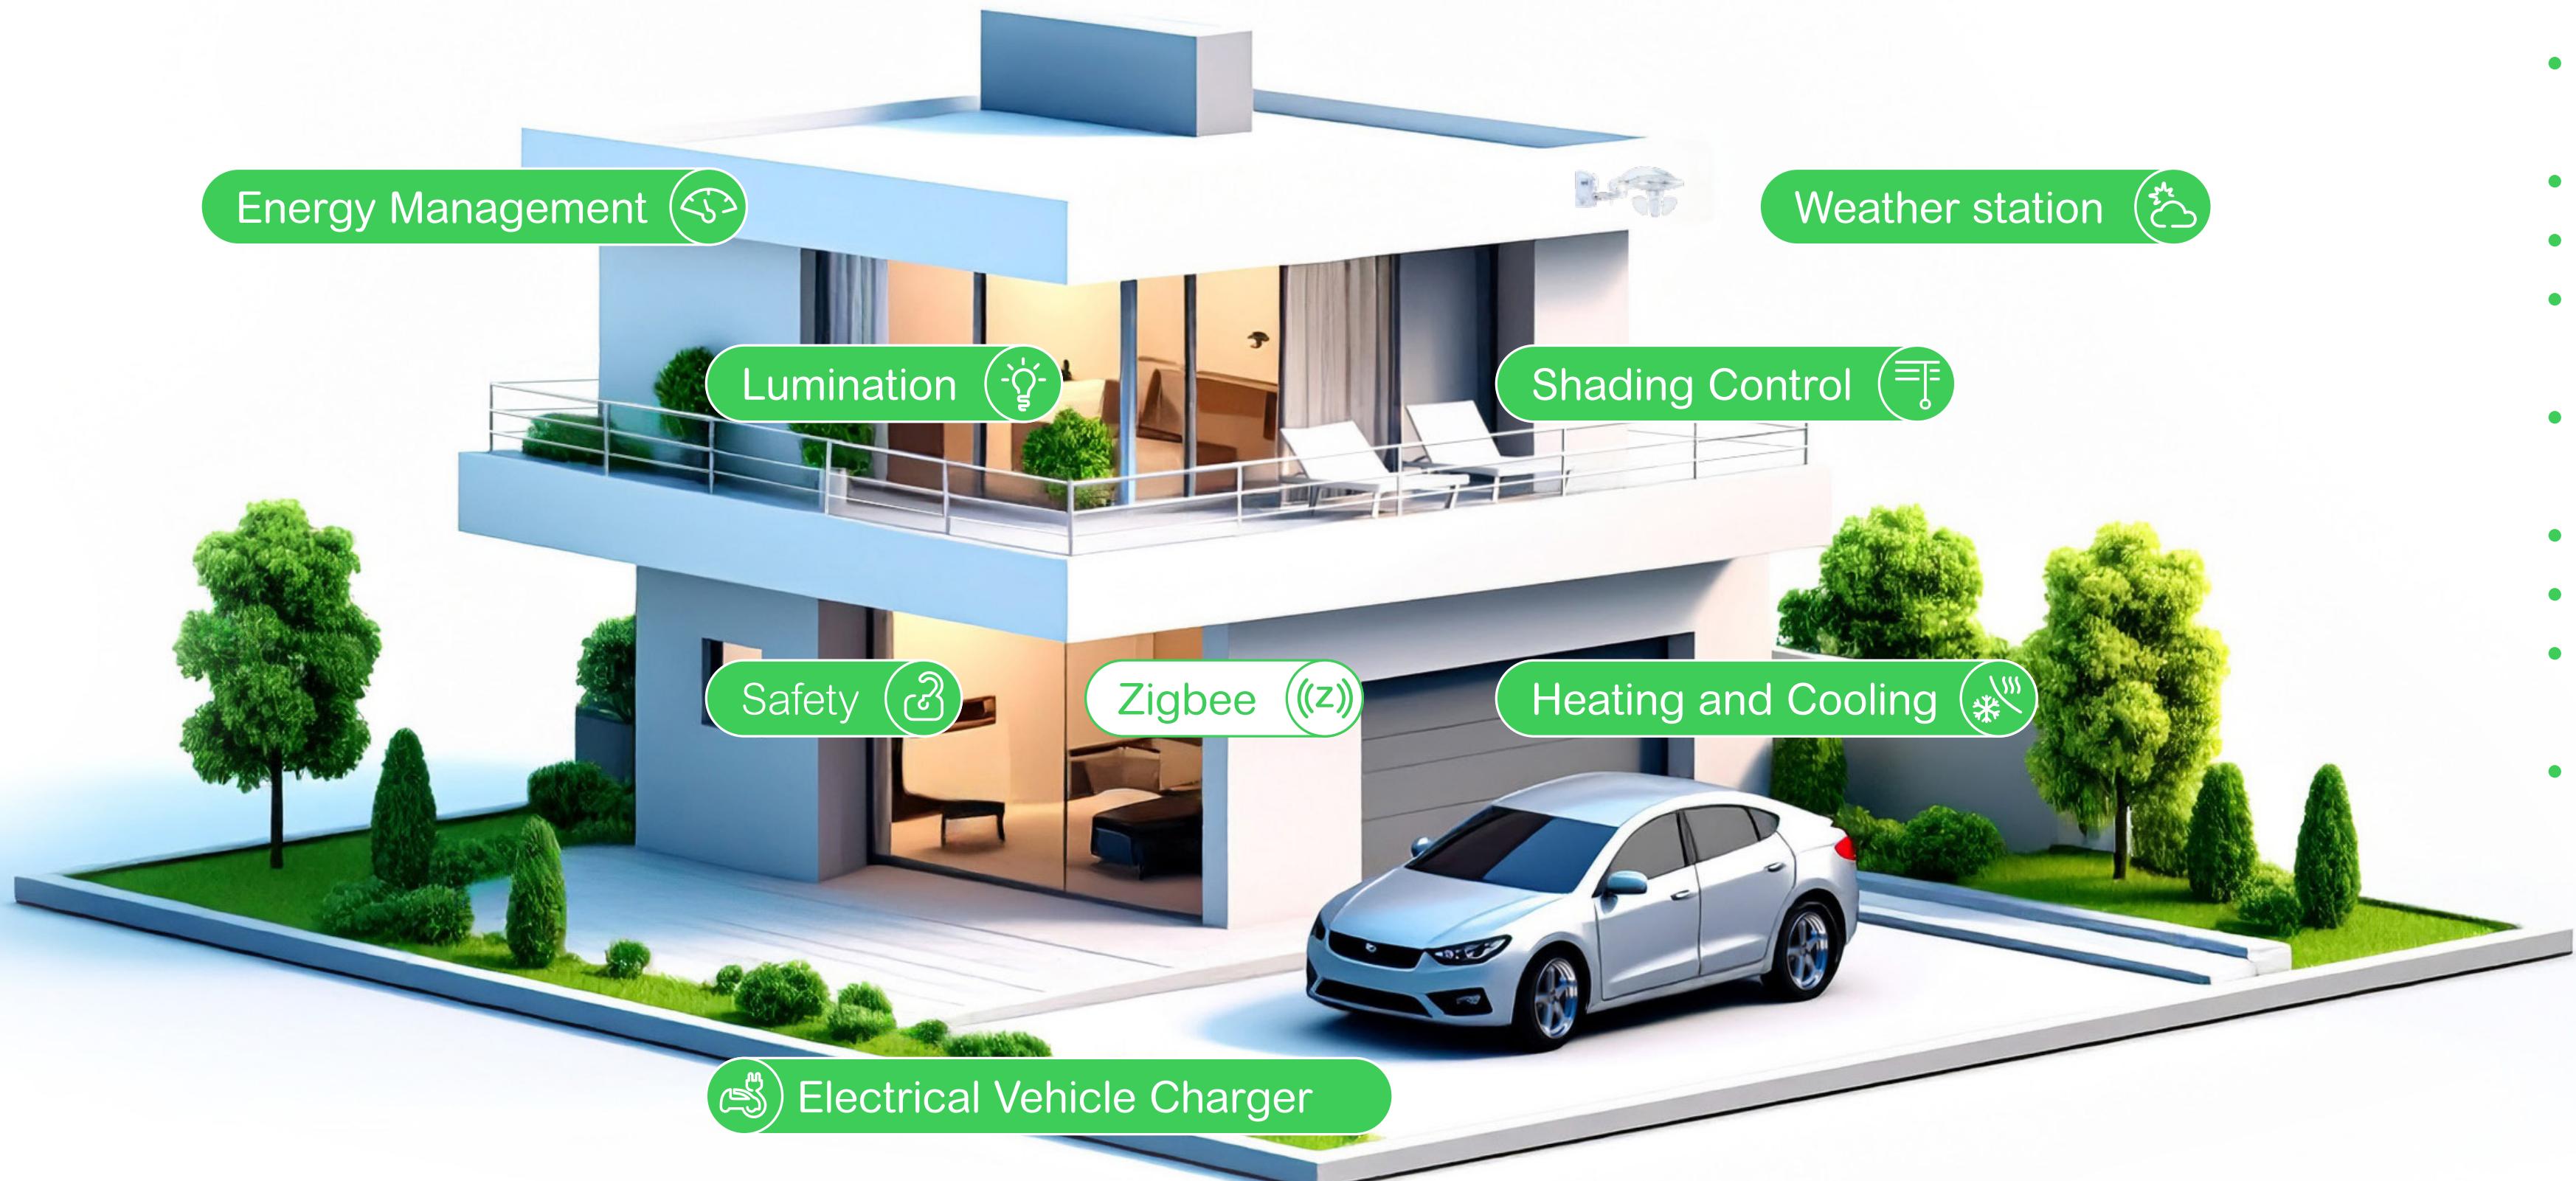

# SpaceLogic™ KNX for apartment

- Control your lights with on/off switches and dimmers
